

LUNCH IS PACKED

# Teaching Program and Scope Sequence

Year 7/8 Technology Mandatory · Materials and production processes

Source-bound program for the Lunch Is Packed reusable textile lunch-bag project  
Version 1.0 · 11 August 2026

**Implementation boundary:** Module order is established by the authorised classroom sequence. Exact duration, lesson allocation, practical schedule, materials, machine model, risk controls, assessment status and submission arrangements are Teacher to confirm.

# 1. Document control and authority

**Course:** Technology 7–8 (2023), Stage 4

**Project:** Lunch Is Packed reusable textile lunch bag

**Cohort:** Year 7/8; class-specific adjustments Teacher to confirm

**Status:** Complete local teaching-program candidate; publication not yet authorised

**Primary authority:** NSW Technology 7–8 Syllabus (2023) outcomes and course requirements

**Local authority:** Teacher-posted Lunch Is Packed Classroom/Drive sequence and current school procedures

**Website:** Lunch Is Packed student course, modules 1–10, activities, folio, assessment and teacher resources

**Privacy boundary:** Private student submissions, names, grades, student folders and student photographs are excluded. This program does not publish answer keys, confidential risk records or unapproved assessment details.

## 2. Rationale and course position

Lunch Is Packed uses a familiar packed-lunch context to develop technological knowledge through a complete design and production process. Students investigate users, textile materials, sustainability, safe production systems and design practice before developing, producing and evaluating a reusable textile lunch bag under teacher direction.

The program treats practical experience and project work as the central learning context. Website theory, visuals, videos and checks prepare students for classroom investigation and production; they do not replace teacher demonstration, supervision or current school safety procedures.

- Investigate a need and define testable criteria.
- Explain how textile materials, machine systems and components contribute to a solution.
- Develop and communicate genuinely different design ideas.
- Apply safe planning, production, quality-control and evidence practices.
- Evaluate the solution using tests and specific evidence.

## 3. Official outcome register

Outcome statements are reproduced from the NSW Technology 7–8 Syllabus (2023) outcomes page. Module mappings show where this project provides evidence; they do not imply that this single project delivers every requirement across Years 7–8.

| Outcome | Official statement | Lunch Is Packed evidence |
|---------|--------------------|--------------------------|
|---------|--------------------|--------------------------|

| Outcome    | Official statement                                                             | Lunch Is Packed evidence |
|------------|--------------------------------------------------------------------------------|--------------------------|
| TE4-SDP-01 | explains relationships between sustainability, design and production           | Modules 3, 10            |
| TE4-PDP-01 | describes the practices and processes of designers and producers               | Modules 2, 5, 8, 10      |
| TE4-MSD-01 | explains how materials, systems and components contribute to solutions         | Modules 2, 4, 6, 7       |
| TE4-PPM-01 | applies processes in the planning, management and production of projects       | Modules 1, 7, 8, 9       |
| TE4-DES-01 | communicates and evaluates design ideas and solutions                          | Modules 1, 3, 5, 8, 10   |
| TE4-SAF-01 | selects and safely uses tools, materials, technologies and processes           | Modules 4, 6, 7, 9       |
| TE4-DIG-01 | demonstrates technological literacy to safely interact in digital environments | Modules 9                |

## 4. Scope sequence overview

Sequence is fixed; duration and lesson allocation are Teacher to confirm. Content descriptors below are course descriptors aligned to official outcomes, not invented syllabus codes.

| Module | Focus                | Outcome emphasis       | Project studio               | Timing             |
|--------|----------------------|------------------------|------------------------------|--------------------|
| 1      | The design challenge | TE4-DES-01, TE4-PPM-01 | Design brief evidence lab    | Teacher to confirm |
| 2      | Textiles around us   | TE4-MSD-01, TE4-PDP-01 | Textile sample investigation | Teacher to confirm |
| 3      | Sustainable lunch    | TE4-SDP-01, TE4-       | Lunch-waste action           | Teacher to         |

| Module | Focus                         | Outcome emphasis                       | Project studio                      | Timing             |
|--------|-------------------------------|----------------------------------------|-------------------------------------|--------------------|
|        | choices                       | DES-01                                 | investigation                       | confirm            |
| 4      | Tools, materials and safety   | TE4-SAF-01, TE4-<br>MSC-01             | Safety scenario studio              | Teacher to confirm |
| 5      | Develop and communicate ideas | TE4-DES-01, TE4-<br>PDP-01             | Four-concept design studio          | Teacher to confirm |
| 6      | Know the sewing machine       | TE4-MSC-01, TE4-<br>SAF-01             | Sewing machine systems lab          | Teacher to confirm |
| 7      | Set up and practise           | TE4-SAF-01, TE4-<br>PPM-01, TE4-MSC-01 | Stitch detective lab                | Teacher to confirm |
| 8      | Decoration and surface design | TE4-PDP-01, TE4-<br>DES-01, TE4-PPM-01 | Designer and applique sample studio | Teacher to confirm |
| 9      | Plan and construct            | TE4-PPM-01, TE4-<br>SAF-01, TE4-DIG-01 | Production control room             | Teacher to confirm |
| 10     | Test, evaluate and improve    | TE4-DES-01, TE4-<br>SDP-01, TE4-PDP-01 | Product test and evaluation lab     | Teacher to confirm |

## 5. Teaching and learning sequence

Each module follows a common student cycle: explicit theory and visual interpretation; one student-controlled click-to-play video at the strongest mapped learning point where it adds value; ten adjacent knowledge checks per section; guided written response; project studio; folio evidence; teacher feedback and practical application where authorised. Module 9 deliberately relies on authentic visual and production evidence instead of an unrelated video.

## Module 1: The design challenge

**Outcome emphasis:** TE4-DES-01, TE4-PPM-01

**Module learning intention:** Define a source-grounded design opportunity and establish evidence that can guide later decisions.

**Project studio:** Design brief evidence lab

**Consolidated evidence:** Need statement, user profile, constraints and testable criteria.

**Timing and practical allocation:** Teacher to confirm

| Section                                | Teaching and learning sequence                                                                                                                                                                                                                                                                                                                            | Evidence, feedback and route                                                                                                                                                               |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.1 Need statement and design brief    | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; use the watch-for prompt with the single mapped click-to-play video; compare a correct application with a common misconception; connect the idea to the current design or production decision. | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-01.html#section-1 |
| 1.2 Users and real needs               | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-01.html#section-2 |
| 1.3 Criteria, constraints and evidence | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-01.html#section-3 |

## Adjustment and access prompts

- Pre-teach key vocabulary using the photograph, diagram and plain-language reading before abstract explanation.
- Allow zoomed Open larger visuals, oral rehearsal, speech-to-text or teacher-provided writing frames where appropriate.
- Chunk the project studio into its displayed ordered steps and preserve autosaved responses between lessons.
- Use teacher-selected Life Skills outcomes only through collaborative curriculum planning; do not combine Life Skills and Stage 4 outcomes for the same student.

## Teacher checkpoint

Review the saved student evidence, address misconceptions through the exact theory section, and confirm any local project or assessment facts before students act on them.

## Module 2: Textiles around us

**Outcome emphasis:** TE4-MS-01, TE4-PDP-01

**Module learning intention:** Explain textile structures and compare observed material properties for a stated end use.

**Project studio:** Textile sample investigation

**Consolidated evidence:** Fibre-yarn-fabric explanation, sample comparison and recommendation.

**Timing and practical allocation:** Teacher to confirm

| Section                       | Teaching and learning sequence                                                                                                                                                                                                                                                                                                                            | Evidence, feedback and route                                                                                                                                                               |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 Textiles in everyday life | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-02.html#section-1 |
| 2.2 From fibre to fabric      | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; use the watch-for prompt with the single mapped click-to-play video; compare a correct application with a common misconception; connect the idea to the current design or production decision. | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-02.html#section-2 |
| 2.3 Selecting by properties   | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-02.html#section-3 |

## Adjustment and access prompts

- Pre-teach key vocabulary using the photograph, diagram and plain-language reading before abstract explanation.
- Allow zoomed Open larger visuals, oral rehearsal, speech-to-text or teacher-provided writing frames where appropriate.
- Chunk the project studio into its displayed ordered steps and preserve autosaved responses between lessons.
- Use teacher-selected Life Skills outcomes only through collaborative curriculum planning; do not combine Life Skills and Stage 4 outcomes for the same student.

## Teacher checkpoint

Review the saved student evidence, address misconceptions through the exact theory section, and confirm any local project or assessment facts before students act on them.

## Module 3: Sustainable lunch choices

**Outcome emphasis:** TE4-SDP-01, TE4-DES-01

**Module learning intention:** Use audit and life-cycle evidence to explain a realistic sustainability response.

**Project studio:** Lunch-waste action investigation

**Consolidated evidence:** Baseline audit, life-cycle analysis and measurable action plan.

**Timing and practical allocation:** Teacher to confirm

| Section                           | Teaching and learning sequence                                                                                                                                                                                                                                                                                                                            | Evidence, feedback and route                                                                                                                                                               |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3.1 The single-use problem        | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; use the watch-for prompt with the single mapped click-to-play video; compare a correct application with a common misconception; connect the idea to the current design or production decision. | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-03.html#section-1 |
| 3.2 Product life cycle thinking   | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-03.html#section-2 |
| 3.3 Personal action with evidence | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-03.html#section-3 |

## Adjustment and access prompts

- Pre-teach key vocabulary using the photograph, diagram and plain-language reading before abstract explanation.
- Allow zoomed Open larger visuals, oral rehearsal, speech-to-text or teacher-provided writing frames where appropriate.
- Chunk the project studio into its displayed ordered steps and preserve autosaved responses between lessons.
- Use teacher-selected Life Skills outcomes only through collaborative curriculum planning; do not combine Life Skills and Stage 4 outcomes for the same student.

## Teacher checkpoint

Review the saved student evidence, address misconceptions through the exact theory section, and confirm any local project or assessment facts before students act on them.

## Module 4: Tools, materials and safety

**Outcome emphasis:** TE4-SAF-01, TE4-MSC-01

**Module learning intention:** Recognise hazards, apply specific controls and connect resources to their actual functions.

**Project studio:** Safety scenario studio

**Consolidated evidence:** Workstation reading and scenario-based hazard-control responses.

**Timing and practical allocation:** Teacher to confirm

| Section                            | Teaching and learning sequence                                                                                                                                                                                                                                                                                                                            | Evidence, feedback and route                                                                                                                                                               |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4.1 Safe textile-work routines     | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; use the watch-for prompt with the single mapped click-to-play video; compare a correct application with a common misconception; connect the idea to the current design or production decision. | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-04.html#section-1 |
| 4.2 Pins, scissors and steam irons | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-04.html#section-2 |
| 4.3 A purposeful equipment list    | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-04.html#section-3 |

## Adjustment and access prompts

- Pre-teach key vocabulary using the photograph, diagram and plain-language reading before abstract explanation.
- Allow zoomed Open larger visuals, oral rehearsal, speech-to-text or teacher-provided writing frames where appropriate.
- Chunk the project studio into its displayed ordered steps and preserve autosaved responses between lessons.
- Use teacher-selected Life Skills outcomes only through collaborative curriculum planning; do not combine Life Skills and Stage 4 outcomes for the same student.

## Teacher checkpoint

Teacher demonstration and confirmation are required before machine, heat, sharp-tool, adhesive, pressing or construction actions. Exact equipment, model, settings, materials and risk controls remain Teacher to confirm.

## Module 5: Develop and communicate ideas

**Outcome emphasis:** TE4-DES-01, TE4-PDP-01

**Module learning intention:** Transform research into genuinely different concepts and justify a selected direction.

**Project studio:** Four-concept design studio

**Consolidated evidence:** Research influences, four concepts and criteria-based justification.

**Timing and practical allocation:** Teacher to confirm

| Section                         | Teaching and learning sequence                                                                                                                                                                                                                                                                                                                            | Evidence, feedback and route                                                                                                                                                               |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5.1 Research and inspiration    | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-05.html#section-1 |
| 5.2 Generate different concepts | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; use the watch-for prompt with the single mapped click-to-play video; compare a correct application with a common misconception; connect the idea to the current design or production decision. | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-05.html#section-2 |
| 5.3 Final design communication  | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-05.html#section-3 |

## Adjustment and access prompts

- Pre-teach key vocabulary using the photograph, diagram and plain-language reading before abstract explanation.
- Allow zoomed Open larger visuals, oral rehearsal, speech-to-text or teacher-provided writing frames where appropriate.
- Chunk the project studio into its displayed ordered steps and preserve autosaved responses between lessons.
- Use teacher-selected Life Skills outcomes only through collaborative curriculum planning; do not combine Life Skills and Stage 4 outcomes for the same student.

## Teacher checkpoint

Review the saved student evidence, address misconceptions through the exact theory section, and confirm any local project or assessment facts before students act on them.

## Module 6: Know the sewing machine

**Outcome emphasis:** TE4-MS-C-01, TE4-SAF-01

**Module learning intention:** Explain how machine components interact and distinguish general systems from model-specific facts.

**Project studio:** Sewing machine systems lab

**Consolidated evidence:** System explanation and classroom-machine observation guide.

**Timing and practical allocation:** Teacher to confirm

| Section                                  | Teaching and learning sequence                                                                                                                                                                                                                                                                                                                            | Evidence, feedback and route                                                                                                                                                               |

| 6.3 Controls and their purpose           | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-06.html#section-3 |

## Adjustment and access prompts

- Pre-teach key vocabulary using the photograph, diagram and plain-language reading before abstract explanation.
- Allow zoomed Open larger visuals, oral rehearsal, speech-to-text or teacher-provided writing frames where appropriate.
- Chunk the project studio into its displayed ordered steps and preserve autosaved responses between lessons.
- Use teacher-selected Life Skills outcomes only through collaborative curriculum planning; do not combine Life Skills and Stage 4 outcomes for the same student.

## Teacher checkpoint

Teacher demonstration and confirmation are required before machine, heat, sharp-tool, adhesive, pressing or construction actions. Exact equipment, model, settings, materials and risk controls remain Teacher to confirm.

## Module 7: Set up and practise

**Outcome emphasis:** TE4-SAF-01, TE4-PPM-01, TE4-MS-01

**Module learning intention:** Apply demonstrated setup routines, practise control and diagnose visible stitch symptoms safely.

**Project studio:** Stitch detective lab

**Consolidated evidence:** Setup checklist and symptom-check-response sample log.

**Timing and practical allocation:** Teacher to confirm

| Section                             | Teaching and learning sequence                                                                                                                                                                                                                                                                                                                            | Evidence, feedback and route                                                                                                                                                               |

### Adjustment and access prompts

- Pre-teach key vocabulary using the photograph, diagram and plain-language reading before abstract explanation.

- Allow zoomed Open larger visuals, oral rehearsal, speech-to-text or teacher-provided writing frames where appropriate.
- Chunk the project studio into its displayed ordered steps and preserve autosaved responses between lessons.
- Use teacher-selected Life Skills outcomes only through collaborative curriculum planning; do not combine Life Skills and Stage 4 outcomes for the same student.

### Teacher checkpoint

Teacher demonstration and confirmation are required before machine, heat, sharp-tool, adhesive, pressing or construction actions. Exact equipment, model, settings, materials and risk controls remain Teacher to confirm.

## Module 10: Test, evaluate and improve

**Outcome emphasis:** TE4-DES-01, TE4-SDP-01, TE4-PDP-01

**Module learning intention:** Test the solution against criteria and use evidence to evaluate performance and propose improvement.

**Project studio:** Product test and evaluation lab

**Consolidated evidence:** Test matrix, evidence-based evaluation and reflective improvement.

**Timing and practical allocation:** Teacher to confirm

| Section                                  | Teaching and learning sequence                                                                                                                                                                                                                                                                                                                            | Evidence, feedback and route                                                                                                                                                               |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10.1 Testing the product                 | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-10.html#section-1 |
| 10.2 Evidence-based evaluation           | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; use the watch-for prompt with the single mapped click-to-play video; compare a correct application with a common misconception; connect the idea to the current design or production decision. | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-10.html#section-2 |
| 10.3 Specific improvement and reflection | Activate prior knowledge; explicitly teach the named concept using the adjacent project-specific photograph or diagram; model precise textiles vocabulary; compare a correct application with a common misconception; connect the idea to the current design or production decision.                                                                      | 10 knowledge checks with section-specific return feedback; guided Read–Select–Explain–Check written response; labelled response saved to My folio. Route: modules/module-10.html#section-3 |

## Adjustment and access prompts

- Pre-teach key vocabulary using the photograph, diagram and plain-language reading before abstract explanation.
- Allow zoomed Open larger visuals, oral rehearsal, speech-to-text or teacher-provided writing frames where appropriate.
- Chunk the project studio into its displayed ordered steps and preserve autosaved responses between lessons.
- Use teacher-selected Life Skills outcomes only through collaborative curriculum planning; do not combine Life Skills and Stage 4 outcomes for the same student.

## Teacher checkpoint

Review the saved student evidence, address misconceptions through the exact theory section, and confirm any local project or assessment facts before students act on them.

## 6. Formative assessment and feedback

- Thirty section-level learning cycles provide 300 auto-checked questions. Incorrect feedback returns to the precise relevant theory section without revealing the answer.
- Thirty guided responses use Read–Select–Explain–Check, a sentence starter and an Appropriate response example that does not answer the live prompt.
- Ten project studios preserve substantial labelled evidence rather than completion ticks.
- My folio consolidates responses, supports backup/restore and prints a device-local practice record. It is not Classroom submission or cloud saving.
- Teacher observation and questioning remain essential during material testing, machine setup, production, safety and evaluation.

## 7. Literacy, numeracy and digital demands

| Demand           | Embedded practice                                                                                                                   | Possible support                                                                                                              |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Literacy         | Precise textile vocabulary, annotations, criteria, evidence statements, sequencing and evaluation.                                  | Visual glossary, oral rehearsal, sentence frames, worked non-answer examples and chunked prompts.                             |
| Numeracy         | Comparison, proportion, ordered sequences, teacher-confirmed measurement and test records.                                          | Use real classroom samples, model one comparison, provide templates and confirm units before practical use.                   |
| Digital literacy | Navigate modules, choose whether to play a video, save device-local evidence, back up and restore a folio, record authentic images. | Explicit privacy and storage explanation, keyboard-accessible controls, printed alternative and teacher-managed file support. |

## 8. Safety, practical and assessment boundaries

**Non-negotiable:** This program is not a risk assessment, safe operating procedure or substitute for teacher demonstration. Apply current school procedures, supervision, equipment checks and student adjustments before practical work.

- No unsupervised or home practical is directed by the website.
- Exact pattern, dimensions, seam allowances, materials, machine model, settings, adhesives, pressing sequence and construction method are Teacher to confirm.

- Formal assessment status, marks, dates, notification, submission method and feedback arrangements are Teacher to confirm.
- Designer and cultural content must use the authorised Classroom source and appropriate cultural/intellectual property protocols. Do not infer cultural meaning from imagery alone.

## 9. Planned and actual delivery ledger

Enter school-authorised planned and actual minutes. This project should contribute practical and project learning, but this document does not invent a percentage or claim whole-course compliance from page count.

| Module | Planned theory | Planned investigation/practical | Actual theory | Actual investigation/practical | Notes / variance |
|--------|----------------|---------------------------------|---------------|--------------------------------|------------------|
| 1      | TBC            | TBC                             |               |                                |                  |
| 2      | TBC            | TBC                             |               |                                |                  |
